

Skandinavisk Display & POS is proud to present our new **CO2 emission calculator**; a tool we have developed together with Grakom.

We can now offer our customers to calculate the total CO2 emission when we produce your displays or other POS materials. Not only on the transport but on all the materials we supply to you.

This means that you as a customer get an overview of your CO2 emission, an opportunity to compensate for the same emission, and together with us set goals for how we can reduce your CO2 emission in the long run.

Contact us for a presentation and a talk on how we can cooperate so that your company can reduce its climate footprint and contribute to a cleaner world.
